**AUTOMATED INSTALLATION**

With our fully automated, military grade GPS guided dual anchor driver we are able to drastically reduce project installation times. Our specialized equipment drives two helical anchors (front & rear) in the ground simultaneously, every 45 seconds. The GPS system allows for precision placement and accurate driving depth, taking project quality to the next level.

**VERSYTILITY AND ADAPTABILITY**

As projects progress, module shortages and layout changes can mean substantial and costly re-engineering. The Ready Rack system allows for quick and effortless changes, thanks to its ability to work with all modules, layouts, terrain, and soil types. Our racking allows you to roll with the punches and sleep easy, knowing you have one of the most versatile racks on the market, without breaking the bank.

The **Ready Rack** racking system has been deployed across the US and used on large utility scale projects and small commercial projects. But, with age comes experience, so we’ve redesigned and added some features we know you’ll love. The hardware design is a simple configuration that allows contractors to install at lightning fast speed with integrated adjustable features for challenging sites. Helical anchors and quick-install bracing make this simple system extremely robust. Carefully engineered, strong, and lightweight cee channels are highly configurable while allowing nearly infinite configurations and reduced part counts. Horizontal strut channel is customized to meet our high standards of strength and longevity and allows you to fill every inch of valuable space.
WHAT MAKES THE ReadyRack SYSTEM SO SPECIAL?

FULLY CUSTOMIZABLE ROW LENGTHS
How do you fit more content while increasing production and reducing costs? Fill up every inch of space by creating rows as long or as short as you need.

VERSATILE DESIGN
We can design your rack to fit any panel and in any space and configuration. This can all be done on the fly, thanks to highly adaptable components.

REDUCED PANEL SPACING
Every inch saved between panels means more panels will fit in the same area. High density means high profits.

INCREASED ANCHOR SPACING
Longer spans means less parts, faster installation, and more money in your pocket.

HIGH GROUND CLEARANCE
Whether your project needs clearance for snow or room for maintenance, our highly adjustable anchors have got you covered.

INSTALLER FRIENDLY
Sleek and strong, our super cee channel accommodates varying posts heights and spans, tilts, and adjustments in the field, making our rack an installer’s dream.

HIGH STRENGTH PARTS
Engineered for the toughest northern winters and the harshest southern hurricanes, our racks will still be standing long after everything else.

Racking Material: High Strength Steel
Corrosion Resistance: G90 Galvanized. Higher coating as required.
Snow Load: 0psf to 35psf (higher load options available)
Wind Load: Up to 150mph
Tilt Angle: Customer Specified (5-30 Degrees)
Anchor Depth: Design based on soil type and frost line. Testing performed by APA
Building Code Compliant: IBC 2012
PE Stamped Drawings: APA drawings can be PE stamped for all 50 states and territories.
